

## Dashboard - Instant Access to Your Critical Business Information

Do you know the state of your business? Are the key business and financial numbers at your fingertips? Do you have to read through reports, view multiple screens, use different applications, or read numerous emails to figure out what's going on, good or bad with your business? Dashboard delivers key information, information that's critical to you running your business or department properly, immediately and securely.

Designed to provide summary information to executives, managers and supervisors, Dashboard displays a customized panel of critical information that allows the user to monitor the "health" of their business or their portion of the business providing quick detection of potential problems. With one application and just a few mouse clicks the information you need to know is at your fingertips. "Warning lights" quickly highlight data that requires your attention enabling you to immediately evaluate potential problems. You can print a summary report or copy the information to include in an email or document. You can also display graphs that show historical data for business trend analysis.

The data displayed is controlled by username, password, and user type permitting secure individual data access. You can display financial information, census information, system information, or almost any IHS application data from your AS400. Multiple pages of information may be displayed allowing almost limitless options tailored to your specifications.

Available as a PC or web application with pricing starting at \$7,500, Dashboard can quickly deliver to you the key information you need to effectively and efficiently manage your business.
